Forex Divergence Indicators - Short explanation

Disagreement between the indicator and price is called divergence. Divergence helps the forex trader recognize and react appropriately to a change in price action. Almost all divergence metatrader indicators show divergence of oscillator and price. Divergence is usually price movement determined in relationship to an oscillator indicator. We would like to propose divergence indicator based on oscillators: CCI, Momentum, MACD, RVI, Stochastic etc. Divergence indicators can be used as a leading indicators. Our MetaTrader Divergence indicators based on fractal divergence. [Learn more about fractal divergence...](#)
