For your attention new tool
(expert advisor) e-VirtualStopsManager (Hidden SL and TP manager)

The purpose of e-VirtualStopsManager EA is management of StopLoss and TakeProfit values on trader's side. The main goal is your broker will not know where are your stops actually located.

All orders have individual virtual StopLoss and TakeProfit stored on the chart. If virtual StopLoss or virtual TakeProfit of an order triggered then the expert will close appropriate order by the market. Slippage option for close command is available on external params.

There are Virtual Trailing and Virtual Breakeven features embedded in e-VirtualStopsManager EA.

Virtual Trailing makes it possible to move StopLoss by the market permanently on some fixed distance if the market goes to profit side and reached some profit checkpoint.

Virtual Breakeven makes it possible to lock StopLoss at some profit level if the market goes to profit side and reached some profit checkpoint.
